## CLAIMS

1. A solar cell ordering system for planning a photovoltaic power system, making a cost estimate thereof, and placing an order thereof, the solar cell ordering system comprising:

roof shape creating means for creating roof shape data based on inputted roof information;

module layout means for designing a layout of a solar cell module using the roof shape data, and drawing up a list of members of necessity for the photovoltaic power system;

estimate creating means for drawing up estimate information using the list of members and unit price information showing a unit price of each member; and

order information processing means for placing an order for the members using the estimate information and order application information including information regarding a customer, which is necessary for application of the order placement.

2. The solar cell ordering system of claim 1, wherein the roof information includes information showing a shape of a roof, which is depicted by a profile line of the roof when the roof is seen from a top, and includes at least one piece of information among information showing

a variety of roof materials, information showing a type of the roof, and information showing a relation between shape and direction of the roof.

- 3. The solar cell ordering system of claim 1, wherein the list of members includes at least name and quantity of each of the members.
- 4. The solar cell ordering system of claim 1, wherein the unit price information includes at least name and a unit price of each of the members.
- 5. The solar cell ordering system of claim 1, wherein the estimate information includes at least a name of each of the members, a quantity of each of the members, a unit price of each of the members, and a total price of all the members.
- 6. The solar cell ordering system of claim 1, wherein the order application information includes at least one of a name of a customer, an address of the customer, an address of an installation site, a payment method, and a desired installation date.
- 7. The solar cell ordering system of claim 1, wherein

the order information processing means draws up order contract information to be sent to a customer, order information for giving an instruction of procurement of the members, shipping instruction information for giving an instruction of shipping of the procured members, and installation completion confirming information having a content written thereon that the photovoltaic power system has completely installed.

- 8. The solar cell ordering system of claim 7, wherein the order contract information includes at least a name of a customer, an address of the customer, an order accepted date, and an installation date.
- 9. The solar cell order system of claim 7, wherein the shipping instruction information includes at least a name of a customer, an address of the customer, an address of an installation site, a name of each of the members, a quantity of each of the members, a name of a constructor, a contact address of the constructor, and a scheduled installation date.
- 10. The solar cell order system of claim 1, further comprising module information obtaining means for obtaining module information including a module output

value of a to-be-installed solar cell module based on a
module serial number which is a number or a symbol
attached for discriminating individual solar cell modules,
a module output value showing a production of electricity
of an individual solar cell module, and a module serial
number of the to-be-installed solar cell module.

- 11. The solar cell order system of claim 10, wherein the module information obtaining means draws up customer information for coordinating the module information and name or address of a customer.
- 12. The solar cell order system of claim 1, wherein input and output of information are carried out using a network.
